BACKHOE LOADER ATTACHMENTS

2021

Caterpillar offers ten types of backhoe buckets for Cat backhoe loaders. While they share many common features, each is designed to perform certain specific tasks. All buckets are pin on unless a pin lock option is available.

Cemetery Buckets

- Offers the ability to dig trenches with vertical walls and flat bottom due to the special design. This type of bucket is used to trench graves and other applications that require this trench profile, such as tanks and swimming pools.

Coral Buckets

- Available in four widths and are designed especially for rocky coral conditions such as those found on coastlines.

Cribbing Buckets

- Designed with a very narrow profile offering the capability to clean and maintain in between and under railroad ties. Ideal for light trenching on moderate abrasive soils.

Ditch Cleaning Buckets

- Available in three widths designed to provide optimum trenching, slope-cutting, grading and finishing work.

Grading Buckets

- Available in two widths and are designed to provide optimum grading, trenching, slope-cutting and finishing work in addition to nesting additional buckets for ease of transportation.

Heavy Duty Buckets

- Available in six widths (pin on and pin lock), all with standard Diagonal Retention System adapters and teeth. They are especially well suited for semi-rocky soil or where hard bank material must be broken out and removed.

Heavy Duty Rock Buckets

- Available in five widths, all with standard Diagonal Retention System adapters and teeth. They are specifically designed to work in the harsh rocky conditions found in various regions of the world.

High Capacity Buckets

- Available in four pin-on widths and six pin lock widths and are especially well suited for work in lower density soils and light materials. They have the same durable characteristics as heavy duty buckets but are capable of moving greater volumes.

Soil Excavation Buckets

- Available in four widths, they have heavy duty characteristics with higher capacity, for use in a variety of conditions including heavy impact. The more aggressive adapter nose angle combined with the new tip design provides enhanced productivity in all soils, plus longer wear and sharpness in rocky areas.

Standard Duty Buckets

- Available in five widths, all with standard Diagonal Retention System adapters and teeth. They are designed for general light duty excavation in soft soil or clay.

CAT® BACKHOE GROUND ENGAGING TOOLS (GET)

Made from through-hardened DH-2 steel, both the tips and adapters of the Diagonal Retention System (DRS) deliver optimal strength and resistance to abrasive wear. The DRS features a right-hand drive pin slot at a 40° angle from the previous horizontal system.

BUCKET TEETH - FEATURES AND APPLICATIONS	
Long	<p>Attributes:</p> <ul style="list-style-type: none"> • Long, symmetric, top and bottom self-sharpening cavities • Good strength, penetration and wear material <p>Applications:</p> <ul style="list-style-type: none"> • General excavation and loading • Low to moderate impact and abrasion
Chisel	<p>Attributes:</p> <ul style="list-style-type: none"> • Flat bottom design <p>Applications:</p> <ul style="list-style-type: none"> • Moderate impact and high abrasion for footing, steam walls or a clean trench floor
Soil	<p>Attributes:</p> <ul style="list-style-type: none"> • Through-hardened DH-2 steel fabrication <p>Applications:</p> <ul style="list-style-type: none"> • Hard soil jobsites • Non-abrasive, low-impact situations
Penetration	<p>Attributes:</p> <ul style="list-style-type: none"> • Leading edge with 60% less cross-sectional area • Single center rib that self-sharpens during wear <p>Applications:</p> <ul style="list-style-type: none"> • Densely-compacted materials
Wide	<p>Attributes:</p> <ul style="list-style-type: none"> • Flat bottom design • Reduced spillage <p>Applications:</p> <ul style="list-style-type: none"> • Increased bucket capacity situations • Cohesive materials with minimal penetration needs
Sharp	<p>Attributes:</p> <ul style="list-style-type: none"> • Curved shape • Strong and durable <p>Applications:</p> <ul style="list-style-type: none"> • Densely-compacted materials
Sharp - Twin	<p>Attributes:</p> <ul style="list-style-type: none"> • Curved shape • Very good penetration • Stays sharp <p>Applications:</p> <ul style="list-style-type: none"> • Hard-to-penetrate fracturable materials

Cat compaction wheels provide a low cost option for trench compaction. The wheels feature tapered roller bearings and tapered foot design for smooth operation. Six to ten passes are usually adequate to achieve compaction in normal soil conditions, dependent on the required compaction levels.

Pin on compaction wheels can be used in combination with applicable pin grabber quick coupler.

Cat cold planers are designed for small paving jobs in residential and commercial applications and are primarily used to economically restore asphalt and concrete surfaces. Designed with a high speed drum and conical bits to quickly remove asphalt and concrete. They are ideal for milling imperfections prior to resurfacing, removing deteriorated pavement, removing traffic lane stripes and jobs where the use of dedicated planers is limited.

Built to cut through dense dirt, loosen rocky soil and break below the frost layer, Cat rippers are taking on some of the most challenging ground conditions. And because they are made for specific Cat models, they can better transfer machine power into ripping power.

Cat vibratory plate compactors provide superior compaction force in a reliable, low-maintenance package. These units produce high-power impulses at a rate of 2200 impacts per minute. The forces generated by this vibration drive soil particles close together for solid, stable compactions. Whether in a trench or on a slope, driving sheeting or posts, Cat compactors are the superior choice for any jobsite's compaction tasks.

VIBRATORY PLATE COMPACTOR

VIBRATORY PLATE COMPACTOR	
MODEL	CVP40

Cat thumbs are versatile tools designed to work with the Cat mini hydraulic excavator bucket to easily grab, pick up, handle and load irregular or loose material, which would otherwise be difficult to handle with a bucket only. Thumbs are ideal for handling wooden logs, poles, brush, metal, trash, rock and debris in site cleanup, land clearing, landscaping, material handling and construction applications.
